

Statements

Options:

- Embed `isTraceEnabled()` Statement

If checked `isTraceEnabled()` surrounds the trace statement.

The statements themselves are defined in Log4E (Templates) > `Is<Level>Enabled Statements` and Log4E (Templates) > `Is<Position>Enabled Statements`

As a result the logger statements are automatically inserted like in that example:

```
public String myMethod(String arg1) {  
    if (logger.isDebugEnabled()) {  
        logger.debug(...);  
    }  
}
```

```
//Your code....  
}
```

- Use braces when embedding a `is<Level>Enabled()` statement [pro version only]

When not checked, the generation of braces will be omitted. Example:

```
if (logger.isDebugEnabled())  
    logger.debug(...);
```
